

The Three Tier Architecture (Mika's Music School) - User

Client views the **presentation tier**, displaying data and services available on Mika's Music School website. The presentation tier interacts with logical tier to output the data.

Logical tier is the middle tier that communicates between Presentation tier and Database tier. It process the activity and modifies the data on the database tier.

Database tier handles, stores and retrieves information on database. The database management system allows the creation, querying updating and administration of database
